

Domain Registration

Description

Need a new domain name for your website? Let us order it for you with your new managed website. We register it for at least 2 years and set it so that it works with your website. You don't have to worry about your DNS settings or your MX records. We take care of all that. With your own control panel, you can forward your name onto another web address which enables you to have multiple domains and simply re-direct your visitors to your main website. You can also forward any email sent to your domain to another email address for no extra charge.

A webmail service is provided with all our hosting packages for as many accounts as you need. Want shared calendars with your colleagues or better cross compatibility on all your devices? Ask us about Google Apps or Microsoft Office 365. Already have an email account? Not a problem, we can migrate your existing emails to their new home. Each migration is taken on as a project so you don't lose your important information. We can advise on a bit of housekeeping and spam filtering to keep your inbox healthy.

We find it easier to register domains on your behalf when creating a website because it all gets done in one place and you only have one bill to pay. If you've never registered a domain name before and need advice on the best domain name for you then it's worth giving us a quick call to ask for a professional opinion before wasting money on registration and printed stationery. It makes no sense to buy up lots of domain names to describe your business. We've seen this done many times and it is usually down to a misunderstanding of how search engines work.

Find out if your preferred domain name is available with our domain name checker
